What is TorZip?

TorZip is an anonymous file archiver and data compression utility developed by Roshene Tugal and Alexander Tugal, first released in autumn of 2009.

TorZip works a bit differently from ordinary file archivers such as WinRAR and WinZip, the difference lies in the fact that almost any .rar or .zip archive can be traced back to its author, while **.tor** archives are crypted to be anonymous making it mathematically impossible to trace when, where, and how the files were made.

TorZip Downloads

To start using the TorZip download the file for your preferred language. This file can be saved wherever is convenient, e.g. the Desktop or a USB flash drive.

Language	Microsoft Windows (2.3.25-14)	Mac OSX (2.3.25-14)	Linux (2.3.25-14)

See our instructions on how to verify package signatures, which allows you to make sure you've downloaded the file we intended you to get. Also, note that the Firefox ESR in our bundles is modified from the default Firefox ESR

Comments and suggestions

TorZip is under development and not yet complete. To discuss improvements and submit comments, please use the tor-talk mailing list.

More information

What is TorZip and why do I need it?

To learn more about Tor, visit the Tor Project website.

What is in the Tor Browser Bundle?

It contains Tor, Vidalia, a modified Firefox ESR, and Torbutton (design) (version details).

How can I make my own bundle?

To download the source code and learn how to build the bundle yourself, read the build instructions.

Tor Browser Bundle is partially based on Mozilla Firefox ESR.
