

Introduction

Tor Metrics team report on the work done to complete Milestone 3.

Milestone 3: Onionoo and Atlas

3.1. Define a release process for Onionoo and put out one or more releases.

We defined a release process and put out three releases by now:

- Onionoo 3.1-1.0.0
 - <https://lists.torproject.org/pipermail/tor-dev/2016-November/011665.html>
- Onionoo 3.2-1.1.0
 - <https://lists.torproject.org/pipermail/tor-dev/2017-January/011872.html>
- Onionoo 4.0-1.2.0
 - <https://lists.torproject.org/pipermail/tor-dev/2017-February/011951.html>

3.2. Provide user-friendly documentation that empowers users to independently operate Onionoo instances.

We improved the operator's guide similar to how we improved the CollecTor operator's guide a few months ago:

<https://gitweb.torproject.org/onionoo.git/tree/INSTALL.md>

3.3. Improve all usability issues of Atlas that are classified as High priority or above in the issue tracker as long as they are within scope and reported at least six months before the end of the award.

We just published a blog post about recent improvements to Atlas:

<https://blog.torproject.org/blog/atlas-recent-improvements>

Atlas Recent Improvements

Posted March 6th, 2017 by iri in [Atlas](#), [bridges](#), [metrics](#), [relays](#)

[Atlas](#) is a web application to learn about currently running Tor relays and bridges. You can search by fingerprint, nickname, country, flags and contact information and be returned information about its advertised bandwidth, uptime, exit policies and more.

Details for: iriUoaRelay

General Overall information on the Tor relay

Configuration

Nickname

iriUoaRelay

OR Addresses

139.133.232.231:443
