

Introduction

This is a report on the work done for Milestone 6 completion by Tor Metrics Team.

Milestone 6: Complete

Milestone: 6 Metrics

6.1 Conduct a usability analysis of the current Tor Metrics website to identify the most pressing usability issues.

Done. The following wiki page describes the process of this project that we conducted together with Tor's UX team in November and December of last year:

<https://trac.torproject.org/projects/tor/wiki/doc/UX/MetricsRedesign>

6.2. Improve usability of the most pressing issues identified in the earlier usability analysis as long as they are within scope to make it easier for users to find, compare, and interpret Tor usage and performance metrics.

Done. We launched the redesigned Tor Metrics website in the first half of January, accompanied by the following blog post:

<https://blog.torproject.org/blog/metrics-reloaded>

6.3. Add a visualization of Tor Browser downloads to Metrics.

Done. We put the new graph on Tor Metrics in the second half of January and published the following blog post for it that also contains an early analysis of the new data:

<https://blog.torproject.org/blog/tor-browser-numbers>

6.4. Add at least one visualization to Metrics that is requested by the community.

Done. We added several new graphs, including graphs that the community requested that are related to the Tor Browser downloads graph. But the graph that we reserved for this spot is the graph on bridge users by country and transport, for example:

<https://metrics.torproject.org/userstats-bridge-combined.html?start=2016-11-04&end=2017-02-02&country=us>
